

KLIFT-IT is simple to install!!

- Use the KUT-IT tool or a sod cutter to remove the sod around the rotor
- Remove the internal assembly of the rotor
- Snap on the bottom extender of KLIFT-IT to the bottom of the rotor's internal assembly
- Thread on the KLIFT-IT canister riser to the body of the rotor
- Thread the internal of the rotor back into the body and set your arc
- Done! KLIFT-IT has now raised the rotor by 2" without digging

Life expectancy of the KLIFT-IT is equal to the rotor it is attached to. KLIFT-IT's rugged design is made to last with added features, including increased filtration, a check valve and a one-year warranty!

Need to raise a Rotor? Don't dig it, KLIFT-IT!

KLIFT-IT allows you to raise a rotor "Quickly & Easily" with no digging! As your sprinklers sink over time, you'll need to raise them to keep your lawn evenly green.

Simply clear the sod around the top of your rotor. Unscrew the top and remove the internal assembly. Snap on the bottom extender to the internal assembly then add on the cannister riser and insert internal assembly back into the cannister. Screw the assembly on and set your arc. You've now raised your Rotor two inches for improved performance and it's that easy!

No shovels needed, just the KUT-IT tool or a sod knife. No dirt or rocks in your line, no broken fittings or cuts to your line. With KLIFT-IT's two models you'll be able to raise most common brand-name rotors!

Designed to improve performance, designed to last.

- *Raise most rotors from the top*
- *Easy to install*
- *Stackable*
- *Increases filtration*
- *Check valve for drainage (optional)*

When your rotor is too low,
**DON'T DIG IT,
KLIFT-IT!**

KLIFT-IT is
stackable
for very
low heads.
